

## OUR WORK

CORAL recognizes that our best chance to save coral reefs is in collaboration with the people who are most closely connected to coral reefs. In partnership with local communities, we take a multipronged approach to restoring and protecting coral reefs. Our signature initiatives are:

[Healthy Fisheries for Reefs ▶](#)

[Clean Water for Reefs ▶](#)

[Intact Reef Ecosystems ▶](#)

[Science of Adaptation ▶](#)

## OUR STRATEGIES

### USING SCIENCE TO INFORM SOLUTIONS

In the Puakō community in Hawai‘i, we are collaborating with university partners to conduct dye tracer studies that track the movement of wastewater from cesspools to the ocean.

### ENSURING THAT POLICIES SUPPORT CONSERVATION

In Honduras, we encouraged the government to declare two new Sites of Wildlife Importance: Cordelia Banks in Roatán and Tela Bay. The designation affords a greater level of protection and regulation, thereby reducing fishing pressure and enabling coral reefs to thrive.

### ESTABLISHING EFFECTIVE AND SUSTAINABLE LOCAL MANAGEMENT SYSTEMS

In the Mesoamerican Region, we support our partners Amigos de Roatán Marine Park in conducting patrols and effectively managing Roatán's Marine Protected Areas (MPAs).
